

Latest Thesis and Research Topics on Machine Learning

1. The classification technique for the face spoof detection in artificial neural networks
2. The iris detection and reorganization system using classification and glcm algorithm
3. The pattern detection system using algorithm of textual feature analysis and classification
4. The plant disease detection using glcm and KNN classification in neural networks
5. To propose technique for the prediction analysis in data mining
6. The sentiment analysis technique using SVM classifier in data mining
7. The heart disease prediction using technique of classification

These are some of the latest topics in Machine Learning for thesis and research.
